

Letter of recommendation

September 11, 2014

To Whom It May Concern:

We have been working with "Aquamat2000" OOD for more than 7 years. They have designed and installed drip irrigation systems on more than 300ha of our vineyards, on different locations. Their engineers and designers always research the local climate conditions, terrain topography, soils and water resources in order to prepare the most efficient solution for irrigation. As a result we have had growth in crops volume and quality through the years.

In the last project, at our Belodol vineyards, they implemented climate based irrigation technology and internet remote control. As a result we can monitor and control the irrigation process from our main office. We are always aware of the weather conditions and soil moisture. This also allowed us to experiment with regulated deficit irrigation in the 2013 season, which resulted in good quality crops and substantial irrigation water savings. Irrigation was not used very often during the 2014 season, as it happened to be quite rainy.

We are also very happy with the supplied materials (dripline, water reservoir, pump and filter station, valves and controllers etc.), as well as the work ethic during installation. "Aquamat2000" OOD has supplied the staff training in order to carry out systems maintenance as well as working with specialized software and devices. We hope to be working with "Aquamat2000" OOD for many years to come and highly recommend the company to anyone in the agriculture business.
