

Chrysal BVB plus

Description

Post-harvest conditioner for tulips. Reduces the bending and growth of the tulip in a bouquet.

General

The three major post-harvest problems with tulips are sub-optimal vase life, leaf yellowing and excessive stem bending and stem elongation. To improve these problems Chrysal BVB and Chrysal BVB plus have been developed. These pretreatment products should preferably be used by growers directly after harvest. Chrysal BVB improves the vase life of tulips and counteracts leaf yellowing. Chrysal BVB can be combined with Chrysal plus to make Chrysal BVB plus. Chrysal BVB plus has the same effect as Chrysal BVB, but is also very effective in reducing stem bending and stem elongation.

Effects

- Reduces stem elongation in tulips
- Reduces stem bending in tulips
- Prevents premature leaf yellowing during distribution, sales and vase life
- Improves the quality of the flowers and leaves
- Contains a tracer for dosage control

Packaging & Dosing

Available in 1L bottle and 5L jerrycan. For an optimal treatment dose 1-10ml per litre of water depending on the flower and the treatment time (see product sheet).
