

Chrysal SVB

Description

Post-harvest anti leaf-yellowing treatment for Lilium, Alstroemeria and Euphorbia fulgens.

General

Chrysal SVB is a post-harvest treatment recommended for use by growers. It prevents (premature) leaf yellowing. Furthermore, it stimulates the opening of the buds, which prevents premature wilting of the flower.

A combination of Chrysal SVB and Chrysal AVB can be used to protect Alstroemeria, Euphorbia fulgens and lilies from ethylene produced by external sources. Both products can be dissolved in water simultaneously.

Effects

- Conditioning product for Lilium, Alstroemeria, Eryngium and Euphorbia fulgens
- Maintains the good quality of leaves and flowers
- Contains a tracer for dosage control
- Prolongs vase life
- Easy to dose tablet

Packaging & Dosing

Available in pots containing 250 pills. Use 1 pill per 3 litres of water.
